

TECHNICAL PRODUCT INFORMATION

Product: Lamination Film- High Temperature for Hot Fill

Catalog Number:5091

Product Description: Hot lamination films are flexible materials designed for bonding to substrates using heat and pressure, creating strong and durable laminated structures. the films provide excellent adhesion, thermal stability, and surface protection, enhancing mechanical strength and resistance to moisture and contaminants. Used for packaging, printing, and industrial applications, offering durability, improved performance, and reliable lamination quality.

Thickness: 60-100μ

Width: Can change accordingly per customer request

Mechanical and physical properties:

Property	Units	Value		Test Method
		Min	Max	
Coefficient of Friction – static and dynamic outside/inside layer	-	0.25	0.35	ISO 8195 or ASTM -D1894
Seal Temperature	°c	110	135	Internal
Anti-Static	V	10	12	Internal
Light Transmittance	nm	30	60	UV-VIS
